

ARE YOUR REAGENTS EXPIRING?

WHY SHOULD THEY?

Cell Marque boasts conveniently long shelf lives for all of our high quality antibodies and reagents. While competitor reagents may have shelf lives of as little as six months, all of our products are manufactured with three years of stability!

Long Expiry Antibodies Can Benefit Your Lab in Many Ways:

- ① Maximize your purchase investment by using the entire reagent before it expires.
- ② Save on time, money, and resources by performing fewer lot to lot validations.
- ③ When combined with small volume sizes, you can keep tests in house without fear of throwing away reagents, reducing the number of send-outs.
- ④ Reduces waste and keeps more reagents in stock which cuts down on turnaround time.

Try Cell Marque antibodies today and see for yourself how longer expiration dates can benefit your lab!
